

AI Lead Qualification Automation System

What I'm building

An AI-powered lead qualification workflow built using n8n and OpenAI APIs that automatically analyses incoming leads, classifies them based on business criteria, and routes them through different sales workflows.

Core flow:

1. Lead submits form (n8n Form Trigger)
2. Lead details are normalized and validated
3. Lead record is created in CRM (create: record)
4. OpenAI Chat Model analyzes and qualifies the lead
5. Structured Output Parser extracts clean qualification fields
6. Decision pathway routes lead based on qualification score
7. Automated actions execute (send email, request approval, schedule meeting, or skip)

Tools You Need

- n8n (workflow logic + conditional routing)
- OpenAI (GPT-4 or GPT-4o for lead analysis)
- Google Sheets, Airtable, or HubSpot (CRM + lead logging)
- Gmail or SendGrid(email follow-ups)
- Slack (team notifications and approvals)

n8n Workflow Breakdown (Node-by-Node)

1) Form Trigger (Demo)

Purpose: Capture incoming lead submissions

Configuration:

- Use n8n Form Trigger to create a public form that viewers can use
- Enable all required fields with validation

Output fields:

- Name
- Email
- Company Name
- Role
- Budget Range
- Requirement
- Company Size

Qualifier Form

Kindly fill your detail correctly It will help us to reach out to you.

Full Name *

Email ID *

Company *

Budget

Requirement *

Submit

2.CRM Record

Next node will store the lead's data in given CRM (here Airtable is used)

Lead Qualification Sheet						
Table 1						
	A Name	Email	A Company	# Budget (in \$)	# Required	A Quality
1	Krish Dewangan	krish@gmail.com	ABC	2500	AI Automation	High

3) lead Qualifier (AI Agent)

Purpose: Analyze lead data using GPT-4 and classify quality **Model
It qualifies lead on the basis of given system prompt given to it

Current Prompt :

You are an AI Lead Qualification Assistant.

Your job is to analyse incoming business leads and classify them as:

1. HIGH QUALITY LEAD
2. MEDIUM QUALITY LEAD
3. LOW QUALITY LEAD

Evaluate the lead using the following criteria:

1. BUDGET

High:

Budget greater than \$1000.

Medium:

Budget between \$300–\$1000.

Low:

Budget below \$300 or no realistic budget.

2. BUSINESS INTENT

High:

The lead has a clear business need and wants to implement a solution.

Examples:

- customer support automation
- lead generation
- chatbot deployment
- workflow automation

Medium:

Interested but still researching or exploring options.

Low:

Casual inquiry, curiosity, academic project, or no clear business objective.

3. DECISION MAKER STATUS

High:

Business owner, founder, manager, or authorized decision-maker.

Medium:

Employee or team member gathering information.

Low:

Student, hobbyist, random visitor, or unauthorized contact.

4. REQUIREMENT CLARITY

High:

Specific use case and clear problem statement.

Example:

"We need an AI chatbot for our website to answer customer questions and book calls."

Medium:

General interest but vague details.

Low:

Confusing, unrealistic, or unclear request.

5. URGENCY

High:

Needs implementation immediately or within 30 days.

Medium:

Planning in coming months.

Low:

No urgency or just browsing.

6. BUSINESS MATURITY

High:

Established business, company website, active operations.

Medium:

Small business or early-stage operation.

Low:

No company information or no real business presence.

CLASSIFICATION RULES

HIGH QUALITY LEAD:

Most criteria score High.

Strong business intent.

Budget > \$1000 preferred.

Clear use case.

Decision-maker involved.

MEDIUM QUALITY LEAD:

Mix of High and Medium signals.

Potential opportunity but needs follow-up.

LOW QUALITY LEAD:

Weak intent, unclear requirement, unrealistic expectations, or poor budget fit.

OUTPUT FORMAT (Make Individual Schema)

Lead Quality: [High / Medium / Low]

Qualification Reason:

[2–4 sentence explanation]

Recommended Action:

[Immediate Follow-Up / Nurture Lead / Reject Politely]

Output by AI agents:

"lead_quality": "High",

"qualification_reason": "The lead has a budget of \$2500, indicating strong financial capacity. They have a clear business intent with a specific requirement for full CRM automation, suggesting an immediate need. Additionally, the contact seems to represent a business with potential decision-making authority, enhancing the value of this lead.",

"recommended_action": "Immediate Follow-Up"

4.Updated CRM record

In this node, it will update the record with the AI's output of the same lead.

5.Pathways

Conditions

IF lead_quality == "High,Medium "

→ Route to "Requesting Approval" pathway

ELSE IF lead_quality = "Low"

→ Route to "No Operation" pathway

Pathway Actions (pathway 1& 2 are same)

Pathway 1: Schedule Meeting (High&Medium Quality Leads)*Nodes:

1.Gmail Node: Send Thank You Email

- To: {{lead_email}}
 - Subject: "Thanks for contacting us"
 - Body: Personalised message referencing their requirement
- 2.Slack(Any other communication platform) Node: Send Approval Request
- Channel: #sales-approvals (or your team channel)
 - Message: Lead details + qualification summary
 - Include approve/decline buttons

3 in case of Approval by sales team then

Gmail Node for shceduling meetings with them

Pathway 3.: Thanks Message (Low Quality Leads)

Nodes:

1. Gmail Node: Send Generic Thank You

- Polite decline or "we'll keep in touch" message
- Include link to helpful resources
- Don't commit to follow-up

Thank you for reading it till the end
